

A couple stands on a stone bridge over a hot spring, looking out at the ocean. The scene is set in a lush, tropical environment with large green plants in the foreground and a wooden building on the left. The sky is overcast, and the water reflects the surrounding greenery and the couple's figures.

WHAT IS ASMR ANYWAY?

The patter of water droplets hitting the ground; the crisp crushing of a metallic can; the squeaks of air being blown into a balloon.

Familiar sounds, sure. But do any of them help you to relax? If they do, then you've experienced ASMR (autonomous sensory meridian response).

ASMR. It's everywhere lately. On TV, on our devices and articles on it feature in various publications. There are even people who create ASMR content professionally on social media. The App Store is now home to an array of ASMR apps. But what has earned it so much attention?

- Contact page

The image shows a contact form UI design. It features a white rectangular form area centered on a background of teal and white abstract patterns. The form contains the following elements:

- Firstname**: A text label above a single-line input field.
- Lastname**: A text label above a single-line input field.
- Email**: A text label above a single-line input field.
- Question**: A text label above a larger, multi-line text area.
- Send**: A dark rectangular button with the word "Send" in white text.

Latest news

Subscribe for newsletter

Inschrijven voor Sleep Orbit nieuwsbrief

- Ophalen van user email via Request
- Email meegeven als parameter met subscribe functie
- Sent status checken om juiste output weer te geven aan gebruiker

```
class NewsletterController extends Controller
{
    public function postSubscribe(Request $r) {

        $email = $r->email;

        Newsletter::subscribe($email);

        $status = Newsletter::lastActionSucceeded();

        if($status) {
            return view('newsletter.succes', [
                'data' => $r->email
            ]);
        } else {
            return view('newsletter.fail', [
                'data' => $r->email
            ]);
        }
    }
}
```

Multilang Feature

Toggle language via form

- Twee forms die de NL of ENG value posten via de **languageSwitcher** functie in de **PageController**
- Daar wordt value opgeslagen in **session**

```
<div class="lang-switcher">
  <form action=" {{ route('lang') }}" method="post">
    @csrf
    <input type="hidden" name="lang" value="eng">
    <input type="submit" value="Eng">
  </form>
  <form action=" {{ route('lang') }}" method="post">
    @csrf
    <input type="hidden" name="lang" value="nl">
    <input type="submit" value="NL">
  </form>
</div>
```

```
public function languageSwitcher(Request $r) {

    $r->session()->put('lang', $r->lang);
    return back();

}
```

Multilang Feature

Haal page content op o.b.v. session value

- Bevat de session value “nl”, dan wordt de **home_nl** record geretourneerd, bij value “eng” wordt de **home** record getoond

```
public function getHomeContent(Request $r) {  
  
    $data = Page::get()->where('page_title',  
        ($r->session()->get('lang') == 'nl' ) ? 'home_nl' : 'home' )->first();  
  
    $donations = Payment::get()->where('public', 1);  
  
    return view('pages.home', [  
        'data' => $data,  
        'donations' => $donations  
    ]);  
}
```

Update page content

- Form data ophalen via Request method
- Alle field values toeschrijven aan page instantie en deze opslaan in database
- Bij succes, redirecten naar overzicht van alle pagina's

```
public function postEditPage(Page $page, Request $r) {  
  
    if($r->id != $page->id) abort('403', 'Wrong page');  
  
    $page->page_intro = $r->page_intro;  
    $page->section_title = $r->section_title;  
    $page->content = $r->page_content;  
    $page->button_text = $r->button_text;  
    $page->button_link = $r->button_link;  
    $page->alt = $r->alt;  
    $page->image = $r->image->store('uploads', 'public');  
    $page->image = '/storage/'.$page->image;  
  
    $page->save();  
  
    return redirect()->route('page.index');  
}
```

Donations via Mollie

- Allereerst voorzien we de route langs waar de user zich kan registreren
- User kan zo naam, email, donatie bedrag en een bericht doorgeven naar de **preparePayment** functie in de **MollieController**

```
<div class="mollie-payment">
  <a href="{{ route('mollie.register') }}" class="admin-btn btn-save mollie-payment-btn">Donate</a>
  <button class="admin-btn admin-btn-3" id="toggleDonations">Donation list</button>
</div>
```

Donations via Mollie

- Na form submit wordt in de `preparePayment` functie via `Request` alle data opgehaald
- Alsook wordt een nieuwe betaling gecreëerd via de **Mollie Api**
- De `webhookurl` voorziet informatie omtrent status van betaling

```
public function preparePayment(Request $r)
{
    // dd($r->public);

    $payment = Mollie::api()->payments()->create([
        'amount' => [
            'currency' => 'EUR',
            'value' => bcdiv($r->amount, 1, 2),
        ],
        'description' => 'Payment By codehunger',
        'redirectUrl' => route('payment.success'),
        'webhookUrl' => 'http://acb1399d36ee.ngrok.io/webhooks/mollie'
    ]);

    $deposit = New Payment();

    $deposit->email = $r->email;
    $deposit->firstname = $r->firstname;
    $deposit->lastname = $r->lastname;
    $deposit->message = $r->message;
    $deposit->amount = $r->amount;
    $deposit->status = false;
    $deposit->payment_id = $payment->id;
    $r->public != null ? $deposit->public = true : $deposit->public = false;

    $deposit->save();

    $payment = Mollie::api()->payments()->get($payment->id);

    // redirect customer to Mollie checkout page
    return redirect($payment->getCheckoutUrl(), 303);
}
```

Donations via Mollie

- Vervolgens gaan we de status van de betaling checken
- Komt er een betaling terug, checken of de betaling succesvol was
- Indien ja, **donation status** in database op **true** zetten

```
public function postRegisterPayment(Request $r) {  
  
    if (! $r->has('id')) {  
        return;  
    }  
  
    $payment = Mollie::api()->payments()->get($r->id);  
  
    if ($payment->isPaid()) {  
        $donation = Payment::where('payment_id', '=', $r->id)->first();  
        $donation->status = true;  
        $donation->save();  
    }  
}  
  
public function paymentSuccess() {  
    echo 'payment has been received';  
}
```

A man and a woman are standing in a natural hot spring, looking out at the ocean. The man is on the left, wearing a white t-shirt and patterned shorts. The woman is on the right, wearing a teal crop top and matching pants. They are surrounded by lush greenery and large rocks. In the background, a wooden building with a tiled roof is visible on the left, and the ocean stretches to the horizon under a cloudy sky. The text "SLEEP ORBIT" is overlaid in the bottom left corner.
